

## Tetrabor Hand Lappers

TETRABOR hand lappers are sintered from pure boron carbide without binding agents. Boron carbide is the hardest material after diamond, which is why Tetrabor hand lappers have extremely high abrasion resistance, and minimal wear. They are very economical in use. Fixed with synthetic resin on a plastic handle, Tetrabor hand lappers are ideally suited for dressing and reshaping hard metal as well as high speed tools.

Size 1-3/8" x 9/16" Tetrabor block on a 6" long plastic handle.

Model	Code
3 pc. Set - Grit 250, 320, 400	700450
Super precision for honing - Grit 600	700600
